Accessing CanisiusGuest: Mac OS

First, click on the Airport icon in the menu bar of your screen. This is the icon that looks like a series of curves in a wedge shape. The drop down menu shown to the right is similar to what you will see on your computer's screen.

If you see the network “CanisiusGuest” in the listing, click on its name to connect.

If you don't see the network “CanisiusGuest” in the menu, you will have to manually add it to your computer's configuration. Click on the option for “Join Other Network...”. You will get a pop-up window like the one on the left. Type “CanisiusGuest” into the input box next to “Network Name”. Select “None” from the menu next to “Security”. Check the box for “Remember this network”. Finally, click “Join”.

You should now be connected to the guest wireless network.
