Connecting to the gryphon Network

Go to: Control Panel\All Control Panel Items\Network and Sharing Center

On the left click on Manage wireless networks

Click on Add

Click on Manually create a network profile

The network name will be gryphon / case sensitive

Security type No authentication / Open

Encryption type / blank

Security Key / blank

Check Start the connection automatically

Check Connect even if the network is not broadcasting.

Click on Next

When you access the network you will fill out the gryphon registration page.

You then may have to restart your computer.

If you keep going to the gryphon registration page after you restart clear out your cache / history and you should be all set.
