Changing Webcams in the Browser

You can change Webcams in your browser. This is useful for Video Notes in D2L or changing the camera in Google Meets. Note: in either case, for changes to take effect, you will have to reload the webpage so this cannot be done on the fly-- whatever camera you are using is the one you will be using for the rest of the meeting/recording. Also note that these changes will only take effect for that particular website and you will have to go through a similar process for other websites to grant permission. In this tutorial, three of the major web browsers will be discussed: Firefox, Chrome, and Edge. If you would rather a more visual tutorial, you can click on this link here.

Firefox
Video Note, you will need to go to D2L and, in this case, click on the description for your module.

When you click on the module,

Click on...
Upon clicking on that menu item, a popup will show up. Click on Add Video Note.

When you click on Add Video Note, D2L will show a popup.
window with a preview of the camera that is being used. If this is your first time recording a Video Note in D2L, Firefox will also have a po

ed X instead of the dropdown. Click on the X to the right of Us
...
Chrome is much easier to change than in Firefox. When you open Chrome, click on the three vertical dots in the upper-right.
In the dropdown menu that appears, click on Settings.
In the search bar that appears in the upper mid of your screen (beneath the address bar), type in Camera.
In the list that appears, click on Site Settings.
In the next list that appears, scroll down until you find Camera, which should be highlighted.

When you do that, there will be
If you are currently using your laptop's camera, it may just say webcam. Click on a dropdown menu that says Integrated Webcam if you are not.
In the drop-down menu that appears, choose the webcam that you want to use.
In that list, underneath Cama, is Micropone. In a similar process,
to Camera, choose the microphone you want to use. Often, but not always, it may say USB Microphone or Integrated Microphone.
edependong on what the browser has detected. If you are using headphones/earbuds, some browsers are smarter enough to

The text seems to be cut off and not fully visible. It appears to be discussing the use of cameras or microphones, possibly in the context of security or surveillance. However, without more context, it's challenging to provide a more accurate interpretation.
Changing a camera in Edge will have a similar process. First, click on the three horizontal dots in the upper right of the browser.
In the menu that appears, choose Settings; it has a little gear icon on the left of it.

In the Search Bar in the upper-left, type in Camera.
When you type in Camera, the menu options on the right will change, and select Camera in the menu on the right.
In the dropdown, you can select the camera you wish to use; in this case, Edge had automatically detected the external webcam.
By clicking on the arrow pointing to the left of Search Results, you will be taken back to the menu for Site Permissions.

In this menu,
You can change the Microphone settings in your browser by clicking on Microphone and following similar steps for changing the

When you go to a site that you want to use your camera for the first time, Edge will have a little pop-up in the upper-left section.
if you want this site to use your Camera and Microphone. After this first time you will not be asked again. You will have to repeat this
step every time you go to a new website that you want us to use your Camera or Microphone.
