Changing Webcams in the Browser

You can change Webcams in your browser. This is useful for Video Notes in D2L or changing the camera in Google Meets. Note: in either case, for changes to take effect, you will have to reload the webpage so this cannot be done on the fly -- whatever camera you are using is the one you will be using for the rest of the meeting/recording. Also note that these changes will only take effect for that particular website and you will have to go through a similar process for other websites to grant permission. In this tutorial, three of the major web browsers will be discussed: Firefox, Chrome, and Edge. If you would rather a more visual tutorial, you can click on this link here.

Firefox

Video Note, you will need to go to D2L and, in this case, click on the description for your module.

When you click on the module,

Click on
Upon clicking on that same menu will popup. Click on Add Video Note.

When you click on Video Note, D2L will show a popup.
window with a preview of the camera that is being used. If this is your first time recording a Video Note in D2L, Firefox will also have a pop
up in the upper-left asking you what Camera and Audio to use. By clicking on the dropdown menu, Where it's a

You will have to go through steps 1-3 again.

When you do that, Firefox will show you a similar popup as in steps 4-7, except...
You will have to go through these steps separately for Google Meet or other websites that use your camera or microphone.
1

Chromo muschel toching the camera in Firefox. When you open Chrome, click on the vertical dots in the upper-right corner.
In the drop-down menu that appears, click on Settings.
In the search bar that appears in the upper - mid of your screen (beneath the web address bar), type in Camera.
In the list that appears, click on Site Settings.
In the next list that appears, scroll down habitually until you find Camera, which should be highlighted.

When you do that, there will be
In the drop-down menu that appears, choose the webcam that you want to use.
In that list, under Camera, is Microphone. In a similar process, click on the arrow to the left of Camera to return to the list shown in step 5.
depending on what the browser has detected. If you are using head phones/earbuds, some browsers are smart enough to
When you first go to a website that requires the use of your camera, a pop-up will appear in the upper-left area.
sking if you want to let the website use your Camera or not. Click on allow if you wish for this to happen, otherwise click on block.

you may have to reload the website for the changes to take effect. You will also have to stop for a new website that you.
u want to allow the use of your Camera or Microphone.

Edge
Changing cameras in Edge will have a similar process. First, click on the three horizontal dots in the upper right of the browser.
In the menu that appears, choose Settings; it has a little gear icon on the left of it.

In the Search Bar in the upper left, type in Camera.
When you type in Camera, the menu options on the right will change; find and select Camera in the menu on the right.
In the drop-down, you can select the camera you wish to use; in this case, Edge had automatically detected the external webcam.
6

By clicking on the arrow pointing to the left of Sea Chart Results, you will be taken back to the main menu for Site Positioning.
You can change the microphone in your browser by clicking on 'Microphone' and following similar steps for changing the location and camera permissions.
When you go to a site that you want to use your camera for the first time, Edge will have a little pop-up in the upper left skin.
If you want to use your camera and microphone. After this first time, you will not be asked again. You will have to repeat this.
Every time you go to a new website that you want to use your Camera or Microphone on.
