D2L: Copy Modules in a Course

In D2L, you are able to copy modules in your course. This may be useful if you have modules that you have set up in a way that you want to use as the basis for other modules. Copying modules in this way will copy all content within the module as well (i.e., Word Documents, PowerPoints, Quizzes, etc.) and any sub-modules within the module. Let's get started.

1. First, go to the Course area of your D2L course. In this instance, I am using WORKSHOPS CAN 101E Demonstrator Course.
use.

Then click on Table of Contents in the menu on the left-hand side.
Next, find the grey button that says Related Tools. This is actually a dropdown menu. Choose Course Builder.

You will then be...
e to the Course Builder page. A lot of it can be ignored as there are easier ways to handle most of the options found here. Find the menu options and select 'Copy Structure'. Then, proceed to copy and paste the structure as needed.
d u e t h a t y o u w a n t c o p y. C l i c k o n t h e d r o p d o w n n a r r o w t o t h e r i g h t o f t h e M o d u l e' s n a m e. T h e n c h o o s e C o p y S t r u c t u r e i n t h e m e n
that appears. You can also copy individual submodules and content items by clicking on the plus sign to the left of the title of the
module or submodule and following this step.

The menu will go away without really giving you any indication that anything has

end. However, it preferably involved them in the model. In the top-level model of the list (this will likely have the name of the course or application).
ow exactly how many modules you are going to have and know that they are all going to share the same structure, you can repe...
Your list will update and you will see the model at this step as many times as needed without needing to copy them module again.
The recommendation here is to go back to the content area and see if every...
has copied over correctly.
