How to Use These Tutorials

I just want to give a brief explanation of how to use these tutorials to make using online tools as simple as possible. Many of these will be PowerPoint presentations. Just click on the link to the tutorial you want to view and wait a moment for the presentation to open. Many will be accompanied by an audio track which will automatically begin when the slide is opened. When the audio track has finished, click on the slide to go on to the next slide. If audio is present, it will begin automatically. Most presentations will follow a similar format including a title slide, goals of the tutorial, the content, and an ending slide. When you reach the end, just one more click will close it. You may have to press the ESC key to get back to this wiki.

That's all there is to watching an online tutorial. As other formats are added, we'll explain how to use them as well.
