**Offline files and or folders**

If you have inadvertently set your folders and or files to offline mode you can do the following to bring them back.

Go to the control panel and open up the Sync center

![Sync Center Screenshot](https://via.placeholder.com/150)

The files will show up here if they are in offline mode.

Go to Manage offline files

![Offline Files Screenshot](https://via.placeholder.com/150)

You will want to click on Disable offline files to bring the files and folders online. You will then restart your computer

If you go back into Sync center and back to Manage offline files it should look like the following screenshot
Use offline files to keep copies on your computer of files stored on the network. This allows you to work with them even when you are not connected or a server is unavailable.

Enable offline files

Offline Files is disabled but active. Restart this computer to deactivate Offline Files.
