Zoom: Show In-Meeting Menu Of Controls At All Times

It can be distracting and annoying when the in-meeting menu/controls disappear or re-appear. For that and for convenience, it might be better to simply have these controls shown at all times during your meeting. Here's how:

1. Go to the Zoom Desktop Application (you can download it here if you don't already have it), and click on the Zoom.
In the menu that appears, make sure you are in General and then check "Always show meeting controls".
Now the meeting menu controls should remain on your screen.
